Prior art does not disclose a radiation-emitting semiconductor having a semiconductor body sandwiching between a first principal surface and a second principal surface, at least one of the surfaces has a microstructure, including semiconductor layer sequence including an electromagnetic radiating area, and forming on top of a carrier; a first non-epitaxially formed current spreading layer formed between the carrier and the semiconductor body and being electrically connected to the semiconductor layer sequence; a second non-epitaxially formed current spreading layer formed on the semiconductor body and also being electrically connected to the semiconductor layer sequence; a mirror is formed under the first current spreading layer, wherein the first current spreading layer has a different material than the second current spreading layer (claim 1).

2. Prior art does not disclose a radiation-emitting semiconductor having a semiconductor body sandwiching between a first principal surface and a second principal surface, including semiconductor layer sequence including an electromagnetic radiating area, and forming on top of a carrier; a first non-epitaxially formed current spreading layer formed between the carrier and the semiconductor body and being electrically connected to the semiconductor layer sequence; a second non-epitaxially formed current spreading layer formed on the semiconductor body and also being electrically connected to the semiconductor layer sequence; an electrically conductive

mirror is formed under the first current spreading layer, wherein the first current spreading layer has a different material than the second current spreading layer (claim 13).

3. Prior art does not disclose a radiation-emitting semiconductor having a semiconductor body sandwiching between a first principal surface and a second principal surface, including semiconductor layer sequence including an electromagnetic radiating area, and forming on top of a carrier; a first non-epitaxially formed metal oxide current spreading layer formed between the carrier and the semiconductor body and being electrically connected to the semiconductor layer sequence; a second non-epitaxially formed metal oxide current spreading layer formed on the semiconductor body and also being electrically connected to the semiconductor layer sequence; a mirror is formed under the first current spreading layer, wherein the first current spreading layer has a different material than the second current spreading layer (claim 49).
